

CEFOZONE

Each vial contains:

Composition:

Sulbactam Sodium USP equivalent to Sulbactam0.5 mg
Cefoperazone Sodium USP
equivalent to Cefoperazone.....0.5 mg

Indications :

It is indicated in the treatment of the following infections caused by sensitive bacteria: upper / lower respiratory.

Description:

CEFOZONE a derivative of the basic penicillin nucleus, is a beta-lactamase inhibitor. Chemical designation is (2S, 5R)-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0] heptane-2-carboxylate 4,4-dioxide. It is used to increase the antibacterial spectrum of penicillins and cephalosporins against penicillinase-producing and beta-lactamase-producing organisms such as Staphylococcus aureus, H. flu, Moraxella catarrhalis that are resistant to ampicillin alone. Sulbactam does not improve enterococcal activity of ampicillin. Ampicillin/Gentamicin combination is used for the treatment of enterococcal infection. Sultamicillin is the combination of ampicillin and sulbactam. Sultamicillin is a white to off-white crystalline powder; soluble in aqueous diluents to yield reconstitution of ampicillin and sulbactam.

Contraindications

Sulbactam/cefoperazone is contraindicated in patients with known allergy to penicillins, sulbactam, cefoperazone, or any of the cephalosporins in neonates, especially when premature, and other infants.

Dosage : As per the physician's advice.
